SUMMARY

Data Analyst with 3+ years at Erajaya Swasembada at the intersection of **supply chain** and **data**. I analyze nationwide store-level sales and stock with **Python** and **SQL** to recommend **purchase quantities** to Product Managers for major global brands, run demand-driven **stock allocation** and monitor inventory health through OOS and DOS. I also built the data behind it from scratch: a **PostgreSQL data warehouse** fed by **Python RPA** bots that extract SAP planning and STO data every day (orchestrated with n8n), plus three core **Tableau** dashboards used by regional teams across Indonesia. Machine learning background (LSTM, classification, clustering) and a national data science competition award.

WORK EXPERIENCE

Senior Data Analyst (Inventory & Supply Chain) – Erajaya Swasembada Jul 2023 – Present

Business Analytics & Insights

- Analyzed nationwide store-level sales and stock with **Python** and **SQL** to recommend purchase quantities to Product Managers for major global brands.
- Ran demand-driven stock allocation to retail stores across Indonesia, balancing distribution against each store's actual sales.
- Monitored inventory health through out-of-stock (OOS) and days-of-stock (DOS) metrics, flagging stores at risk of stockouts or overstock so teams could act early.
- Delivered fast, accurate routine and ad hoc analysis for leadership under tight deadlines.

Automated Reporting & Visualization

- Designed and maintained three core **Tableau** dashboards (OOS, DOS, KPI) used by regional teams across Indonesia.
- Developed **RPA bots in Python** that extract the daily planning report (sales, stock, forecast) and stock transfer order (STO) data from **SAP** and load them into the warehouse, orchestrated with **n8n**, eliminating manual exports.
- Built reusable Python data transformation tools that became the team's standard daily workflow.
- Refactored heavy dashboard calculations to keep reports fast and stable on high-volume data.

Data Warehouse & Data Integrity

- Built a **PostgreSQL data warehouse from scratch** (schema, data model, daily history tables) as the single source of truth for national inventory analytics.
- Tracked active store status so allocation and replenishment only target active locations, keeping master data accurate.

Data Science Mentor – Cipta Peluang Nusantara Nov 2023 – Jul 2025

- Mentored students in data analysis using Excel and Python, focusing on data cleaning, processing, and turning raw data into clear insights.
- Invited speaker at “Sedekah Ilmu”, presenting how well-managed data and the right tools can solve business problems.

Data Analyst Intern – Multi Bangun Abadi Jun 2023 – Oct 2023

- Built a spreadsheet-based system to sync warehouse and finance data, keeping records reconciled and accurate.
- Monitored the system to detect and resolve data errors, keeping daily operations running.
- Developed a web dashboard for the marketing team to track performance.

Backend Engineer Intern – Telkom Indonesia Sep 2022 – Feb 2023

- Built web crawlers to collect data from external websites daily and store it automatically in a SQL database.
- Managed and optimized SQL databases to keep data clean and accessible for analysis.
- Developed dashboards and comparison reports to support team meetings and decision-making.

Machine Learning Engineer Intern – Clodeo Indonesia Jul 2022 – Sep 2022

- Designed and implemented an LSTM deep learning model to automate address classification with high accuracy.
- Performed end-to-end cleansing, normalization, and feature engineering on large text datasets using word embeddings.
- Applied batch processing to handle large datasets and keep training and inference stable.

EDUCATION

Bachelor of Computer Science – Telkom University (GPA 3.57/4.00) Aug 2019 – Feb 2023

- Graduated in 3.5 years. Thesis: Classification of Al-Quran Verses in English Translation using Convolutional LSTM and Bidirectional LSTM.

TECHNICAL SKILLS

Data Analysis	Python (Pandas, NumPy), SQL, Advanced Excel, Exploratory & Trend Analysis, Data Cleaning
Visualization & BI	Tableau, Looker, Excel Dashboards
Data Warehouse & RPA	PostgreSQL, Data Warehousing, Data Modeling, ETL, RPA (Python, SAP), n8n
Retail Domain	Inventory Analytics, Stock Allocation, Purchasing Analysis, OOS / DOS
Machine Learning	Scikit-Learn, TensorFlow, PyTorch, Classification, Clustering

ACHIEVEMENTS & CERTIFICATION

- **Best Applied Technique, National Data Science Competition (2021)** – Led the team and owned data collection and preparation for the model.
- **Python Certification (2022)**

PROJECTS

- Multilabel Quranic Verses Classification – github.com/Rafisairfan/Multilabel-Quranic-Verses-Clasification
- Loan Loss Prediction – github.com/Rafisairfan/Loan_Loss_Prediction
- K-Means Customer Segmentation (Retail) – github.com/Rafisairfan/Customer_Segmentation

LANGUAGES

Indonesian, English
